

TECHNOSOFT Corporate Profile

TECHNOSOFT is a leading motion control technology company specialized in the development, design and manufacture of motion control products and custom motion systems.

For over 20 years, TECHNOSOFT has been helping customers enjoy commercial success in various field of industry. This experience has matured into the continuous improvement of the performance and robustness of our products.

Motion Control Solutions

TECHNOSOFT has pioneered the **intelligent drive** as a cost-effective solution in many motion control applications. Embedding a motion controller and a drive into a single unit, an intelligent drive can perform many of the tasks that are traditionally assigned to a central unit.

Customers from various industries requiring a wide range of motion control products and systems for specialized applications have effectively utilized TECHNOSOFT's expertise in the following application fields:

- **Medical** : laboratory, automation, life support devices
- **Packaging**: intelligent solutions for distributed control
- **Textile**: yarn feeder, high dynamic controls
- **Automotive**: sensorless vector control in fuel cell applications
- **Machine tools**: electronic screw drivers and nut runners
- **Semiconductor industry**: wafer handling and processing
- **Aerospace/avionics/defense**: ruggedized solutions

Benefits of TECHNOSOFT Motion Technology

- **All in one**: controller and drive in a single unit
- **One for all**: same drive for DC, stepper, brushless and linear motor
- **Intelligent motors** with integrated motion controller and absolute position center
- **Advanced motion control** profiles supporting EtherCAT, Ethernet, CANopen and TMLCAN Protocols.
